

XAYNA (ZAINAB EHSAN)

Design Engineer · Frontend · Applied AI/ML · Cybersecurity

Lahore, Pakistan · open to remote roles worldwide and relocation

meow@xaynakive.com | +92 325 4024023 | xaynakive.com | github.com/xaynakive | linkedin.com/in/xaynakive

PROFILE

Design engineer and final-year Computer Science student who builds end to end, from custom-trained ML models to deployed web products. I care about both halves of a product: what it can do and what it feels like to use. Selected for Hash Engineering's inaugural Software Engineering Fellowship (1 of 16 from 150+) and founder of a 500+ member student tech community.

EDUCATION

BS Computer Science | Lahore Garrison University, Lahore
Semester 6 SGPA: 3.78/4.00 · final-year project in progress

Oct 2023 – Jun 2027 (expected)

EXPERIENCE

Software Engineering Fellow | Hash Engineering · Remote

Aug 2026 – Present

- 1 of 16 from 150+ applicants. Building a functional application against an engineering brief in a remote, asynchronous team, shipping through GitHub pull requests and iterating on review feedback.

AI/ML Intern, previously AI/ML Contributor | Call Connect AI · Remote, UK

Apr 2025 – Present

- Developed an NLP emotion-classification model for call-centre transcripts, identifying customer sentiment across multiple emotional categories.
- Systematically tested AI-generated responses and documented edge cases to improve output reliability and model robustness.

Founder & Product Designer | PixelFiles

Nov 2024 – Present

- Designed 100+ slides for a retro/VHS-inspired template studio and won its first paying client with a custom investor-pitch deck; own visual identity, pricing and client communication.

Web Designer, Developer & Digital Artist | Independent

2019 – 2024

- Built commissioned Carrd sites and hand-coded Neocities pages, ran a public Carrd resource hub, and published open-source web projects and an early npm package under earlier aliases.

LEADERSHIP & COMMUNITY

Founder | CS Network, LGU

Oct 2024 – Present

- **Built to 500+ members:** a peer-learning community that centralises notes, slides and resources and coordinates technical guidance across the batch.

Founding Community Member, then Campus Lead | Cyberster

Sep 2025 – Mar 2026

- Completed the inaugural Batch 1 cybersecurity programme (instructor-led training and final assessment), then represented Cyberster as Campus Lead at LGU.

Campus Ambassador | SOFTEC

Feb – May 2026

- Recruited and coordinated 34+ LGU teams for the SOFTEC'26 AI & ML Hackathon as the link between students and organisers.

SELECTED PROJECTS

- **Breeze (EmoLens):** trained and evaluated six models on a custom ~100k-sample dataset for four-way intent classification, served through a Flask + Groq (LLaMA 3) interface with a deterministic safety layer; found and corrected a critical mislabelling flaw in a public dataset.
- **PurrSona:** a cat-personality engine running a gradient-boosting model entirely in the browser through ONNX, with no server round-trip.
- **MEOW: in dev,** an open-source modular website editor that turns guided visual choices into real, exportable websites.
- **MeowTM:** a colourful 16-bit ATM simulator written in x86 assembly for emu8086.

SKILLS

AI / ML: custom dataset creation & labelling, model training & evaluation, NLP (sentiment & intent classification), ONNX client-side inference, LLaMA 3 via Groq

Frontend & design: HTML, CSS, JavaScript, GSAP, SVG, responsive and accessible UI, design systems

Backend & cloud: Python, Flask, AWS (S3, RDS, IAM, CloudWatch), GitHub Pages, Cloudflare DNS, DigitalOcean, Azure

Tools & security: Git & GitHub (CI workflows), Replit, VAPT and penetration-testing fundamentals
